Motocaddy iOS App Permissions & Settings for Use with S5 Connect

1. Bluetooth ON. App will prompt to turn Bluetooth ON when user attempts to pair if Bluetooth is OFF. Otherwise, Bluetooth can be turned on as follows: Settings ▶ Bluetooth ▶ Toggle Switch to ON position. Alternately, swipe up from bottom of phone display to open menu, select Bluetooth icon to turn it on.

2. Allow Location Access. App will prompt for this permission when first opened. Location access must be allowed in order to receive distances on the golf course. This permission can be changed as follows: Settings ▶ Select Motocaddy App ▶ Location (Should be set to "While Using").

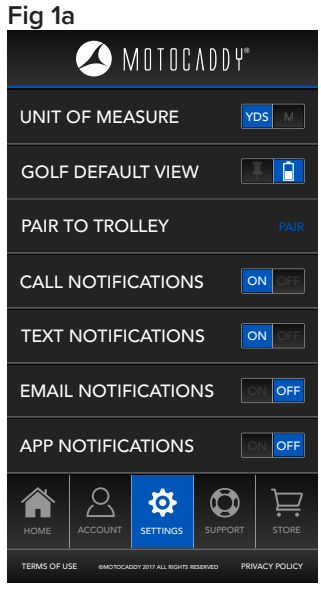
3. Cellular Data. Cellular data access must be set to ON for situations in which WiFi is not available. It is necessary to download the course data in order to use the app.

4. Settings for using Notifications:

A) In the Motocaddy App Settings Menu (**Fig. 1a**), set each desired notification type to the ON position

B) In most cases, the iPhone's notification center will already be set to allow notifications for phone calls, text messages, emails, and applications. In the event that a notification type that is set to ON in the Motocaddy app settings menu is not functioning properly, check the Notifications settings as follows:

Fig 1a



Settings (**Fig 1b**) ▶ Notifications (**Fig 1c**) ▶ Select Application and make sure "Allow Notifications" and "Show in Notification Center" are each set to the ON position. (**Figs 1e – 1h**)
Note: Some apps may have additional permissions settings within their own settings menus.

4. Settings for using Notifications:

A) In the Motocaddy App Settings Menu (**Fig. 2a**), set each desired notification type to the ON position

B) In most cases, Android phones will be setup to allow notifications for phone calls, text messages, emails, and application notifications. In some cases, it may be necessary to check permissions from the phone settings. The process for this may vary between different phone models and Android versions. In general though, the following path will work:

Settings ▶ Apps ▶ Select Application and make sure the "Show Notifications" box is ticked. (see example below, figs 2b – 2d) Repeat for each app.

Note: Some apps may have additional permissions settings within their own settings menus.
